

John  
**BOOS**  
Since 1887

## The Current Picture

As John Boos & Co. celebrates its 125th year of continuous business, they stand with strength built on a block of American history. The well recognized gourmet Boos Block® brand has become significant to the heritage and reputation. Having adapted to market changes through the years, the company continues to grow in its service to the gourmet, foodservice, residential, supermarket, and industrial markets.

During the 125th anniversary year of John Boos & Co., the company has expanded with a move to a new corporate office location combined with a new metal plant facility in Effingham, IL. The new facility at nearly 87,000 square feet, located on over 12 acres of property will allow us to “grow forward” with relocating our current Effingham wood plant facility and on-site kilns to the same new location within the next few years.

Joe Emmerich, President of John Boos & Co., states: “Visionary leaders have fostered John Boos & Co. success every step of the way. The changes in America’s history are built-in incentive for our company to be very open and flexible to the same degree of change.”

# 125th Anniversary - John Boos & Co.

## How It All Started

John Boos & Co., based in Effingham, IL is one of the oldest manufacturers of premium quality foodservice equipment and butcher blocks in the U.S.A. Boos has been in business continuously since 1887. It was in his Effingham, IL blacksmith shop that founder, Conrad Boos first invented what would become the original Boos Block. Having harvested sycamore from local wooded areas, and processed it in his sawmill, Conrad brought it to his blacksmith shop for finishing. That first block of sycamore slab placed on three legs evolved with sheer purpose of a block to absorb the shock of this smith's hammer against the anvil. It was the local butcher, who having seen and admired Conrad's block, became impassioned about owning a block for his meat market. Unknowingly, Conrad's son, John, who having made and sold that first block to the local butcher, took John Boos & Co. into the infancy of the 125 year reign of serving customers in the commercial market sector.

## Reels Of History

As a single product (die block) manufacturer in the early years of John Boos & Co., there became a single minded focus: to make the best die blocks in the world. One of the early company mottos was "Wherever steel meets wood, Boos is Best!" True to the motto, John Boos & Co. sent product for display at the World's Fair in Paris, 1900.

During WWII, John Boos & Co. proved its ingenuity and adaptability to manufacture foodservice worktables and tabletops for the U.S. Army, Navy, and Marine mess halls and kitchens. The company emerged from the war era with a new manufacturing philosophy, service culture, and expanded product lines. Boos butcher block tops grew out of the old fashioned Boos butcher block to meet the growing requirements of the foodservice industry and the residential markets.

Beginning in the mid 1960's, John Boos & Co. further expanded the growth of its stainless steel fabrication. Ever changing to accommodate the market requirements, the company's manufacturing expanded to include an entire range of stainless products. The company combined North American hard rock maple and foodservice grade stainless steel to begin its blended offering of commercial quality carts and work tables. John Boos & Co. currently continues to be the only company in the U.S.A that has both stainless steel fabrication and wood manufacturing facilities in one location.

## Reels Of Change

With over 100 years of adaptation to the markets, the late 1900's presented yet many new opportunities. Events during this era created the catalyst to shape John Boos & Co. as a primary provider of gourmet products and foodservice equipment.

Major catalog and retail store exposure with many of the renowned companies in the kitchen specialty markets promoted growth of the Boos furniture and cutting board lines. Cooking shows gained popularity and Boos Block cutting boards were front and center stage. During the same era, Dr. Dean Cliver renewed interest in wood cutting boards with his Sanitation Study - Wood vs. Plastic!

On the commercial front of the business, John Boos & Co. began further expansion of stainless steel fabrication with the manufacturing of stainless steel sinks for one of the largest supermarket chains in the U.S.A. The chain remains an important customer still to this day.

With a broader scope of manufacturing capabilities to the foodservice trade, the avenue was paved for John Boos & Co. to begin the roll-out of stainless equipment for stadiums and arenas. The stadium concession stands were equipped with stainless products. Several years later, Boos Block® hard rock maple cutting boards and commercial butcher block tops would find their way into the same venues.

John Boos & Co. launched [www.johnboos.com](http://www.johnboos.com) in the 90's and began their growing product market on-line. Boos customers began marketing and selling these same products through their own web sites.

1887

Conrad Boos and his son John, cut their 1st Butcher Block from a Sycamore log. Conrad founded the business and named it after his son John Boos.

1892

Boos Family sells JB&C to the Gravenhorst family and JB&C becomes incorporated. John F. Boos is elected the 1st President of the company.

1895

JB&C location on Jefferson St burned down and was rebuilt. 7 years later, JB&C expands and moves to a different location on South 1st St.

1902

Albert Gravenhorst becomes President of JB&C.

1929

JB&C successfully continues to grow its business despite the Great Depression.

1941

JB&C expands product lines to include foodservice work tables and countertops as 80% of production earmarked for WWII to equip military aid.

1955

JB&C expands by adding a dry kiln, more office and manufacturing space. Shipping docks and warehousing is expanded and new products are created.

1965

JB&C builds its 1st Stainless Steel Table. 1st ground combat action reported during the Vietnam War.

1970

JB&C reaches 100 employees. Customers continue to successfully grow in the food service industry as well as residential homes.

1980

JB&C metal plant burns down and is promptly rebuilt to meet the demands of stainless steel manufacturing.

1990

Stainless steel becomes popular in the kitchen w/ Boos' Cucina Americana roll out. Integrated maple & stainless steel kitchen carts & worktables for the residential industry.

2012
